Cardtek is the most valuable company of Turkish finance and banking sector. Among other numerous projects, we are operating an end-to-end electronic fare collection system in Turkey's third largest city. We manage 3 million financial transactions per day, totally 400 million transactions per month.

In the course of the transition of our databases from Microsoft SQL Server to Oracle, we were searching for a conversion tool. Having analyzed many tools and tested several in trial mode, we noticed that the best solution for us is Ispirer MnMTK since it fits all our requirements with error free conversion feature. Besides, it also provides user-friendly interface.

We have used Ispirer MnMTK for 2 projects. 1st one was 6 months and 2nd one was 3 months. We have finished 2nd one faster since we got familiar with the tool. More than 800 tables with data and 2.200 stored procedures, views, functions and triggers containing around 200 000 lines of code have been successfully converted. The most significant benefit we derived from implementing migration with Ispirer MnMTK was fast and accurate conversion of stored procedures.

Thanks to Ispirer technical team for their support in both projects which helped us to speed up process and decrease migration period. It was our pleasure to work with Ispirer team who are professional and reliable.

We definitely recommend Ispirer MnMTK solution for bigger size MS SQL Server to Oracle migration projects.

Mehmet Dursun GUL,  
Technology Director, Cardtek
